PNNL

## ***Visualization and Active Guidance of Scientific Computations***

A 3D stereo visualization of a 2D vector field selected from a regional climate simulation dataset generated at PNNL. The flow field velocity is indicated by the magnitude along the Z-direction of the visualization. Notice the zero velocity at the center and the high velocity circulation surrounding the swirl in the lower right side. A pair of red-blue glasses is required to see the 3D effect. – By Pak Chung Wong, Harlan Foote, Ruby Leung, and Jim Thomas
